Employment summary

September 2018 – present | Permanent Role

Mid Front End Developer at [Immediate Media Co](#)

Location: London

Role:

Work in an Agile, self-organising, cross-functional agile team developing features for web/mobile applications that are used by thousands of users daily. **Tasks involve:** Collaborating with remote teams and share common React component libraries; Prototyping proof-of-concept apps using React, GraphQL, Apollo client and serverless AWS ; Building serverless MVP apps with AWS Amplify, GraphQL and AWS Appsync; Work with devops and members of the backend team to help define the architecture of greenfield projects; Translating UI components to StoryBook / React code;

Technologies used: JavaScript (ES6+), React, Storybook, Webpack, Git, Jira, Nextjs, GraphQL, Apollo Client, AWS Appsync, AWS Amplify, DynamoDB, CloudFormation

September 2017 – September 2018 | Permanent Role

Junior Full Stack Developer at [Carr Kamasa Design](#)

Location: London

Role:

Worked as part of a small team creating bespoke WordPress websites / applications for a variety of clients, from conception to completion. Duties included translating designs to pixel perfect code,

<https://github.com/Iannes>

creating interactive reusable components, provisioning and deploying Linux servers, working with REST APIs, integrating payment services, RSS feeds and investor tools, website maintenance, writing documentation.

Technologies used: HTML5, CSS3 / Sass, JavaScript (ES6+) / jQuery, PHP, Composer, Ansible, WordPress (LEMP Stack), Webpack, Git

July – August 2017 | **4-week Contract**

Junior Front-End Developer at [Discover Brand Creation](#)

Location: London

Role:

Worked as part of a cross-functional team, during the last 4 sprints (1 week each) of a team-communication app's redesign. The client had their existing web-app redesigned as they decided to migrate it to NW.js. Our team's task was to translate the client's designs into pixel perfect CSS and help the JavaScript team with error debugging.

Technologies used: Sass, Gulp and Bitbucket for version control

July 2016 – Present | **Self Employment**

Freelance Web Developer

Location: Remote

Role:

Creating digital solutions for small businesses.

Technologies used: Wordpress (LEMP stack), ES6, SASS, Vagrant, Ansible, Linux, SVG, React, Gatsby, GraphQL, Apollo, Prisma, Netlify CMS, Statamic CMS
